

Sargent - Louise (Born

1921)

Dec. 1927

Health - undernourished - caustipation -
great deal of nervous energy
seemingly delicate but has surprising amount
of endurance at times

Body tall, slight, poor muscle tone & rhythm

Report of progress

1927-28!

Dec. child likes to do things if games please her.

Does not like to be touched.

Will endure short lessons from me if bribed & entertained.

Likes to have me play games with her.

German measles - short illness - lessons omitted 10 days.

Jan. Change made from having child alone in room to keep her in room with brother and nurse - at first object of thought of being seen, but in 2 weeks forgot about the teacher using more firmness in manner with child and more strenuous ex. given. Giving a choice of 2 ex. works very well.

Feb. Contention a little better. At end of lesson teacher observed child attempting to achieve comfort by taking different positions of his own accord - that she had been taught ex. noble - all same - rolling on floor, no notice taken.
