

## Baby

At Birth baby uses expiration action first as lengthens spine to pass through pelvic opening. He is then ready to make first inspiration, or gasp, as sometimes called.

Tunnel Toy uses this principle of lengthening spine to pass through a small opening.

Use of Toys.

For riding. There are no dark corners or crevices and the children use it to ride in. Wire bow, carriage, crawling, like to kick heels on metal. Think for these reasons metal is better than plastic. Lie along top and watch child inside.

Used circular giving physical benefits. It was the most successful toy the children had. Used in many ways after crawling stage passed.

In school the children need something to climb over, stand on, jump off from.

At Cambridge Lower children climb into it as if it were a well place chair inside & one out.

General equipment  
Tired of swings & ladders  
Children just sit in swings  
like babyplay

Improve handles to see out  
like Stentzger  
Kiddie car? levers?
